A love story

The contemporary design features and the use of composite materials (fibers and resins) with excellent mechanical properties, low density and water resistant, enable outdoor and indoor use due to their adaptability to every environment atmospheres.

The hand craft modelling-based production technique allows the design of rounded shapes without joints or apparent assembly points. Our production facilities enable us to work on small and medium sized series.

The use of an eco resin and the incorporation of surplus materials resulting from the manufacturing process into the production of new objects has its motto in the collective well-being, preventing the increased consumption of resources in a production that is intended to be more sustainable, more environmentally friendly.

The background of the entire page is a complex marbled paper pattern. It features a mix of light cream, off-white, and pale grey tones, with darker grey and black veins swirling and eddying throughout. The pattern has a fluid, organic quality, reminiscent of stone or liquid marbling.
